

# Operation interface instructions

Part 1. Click "ZCRIDING" APP program

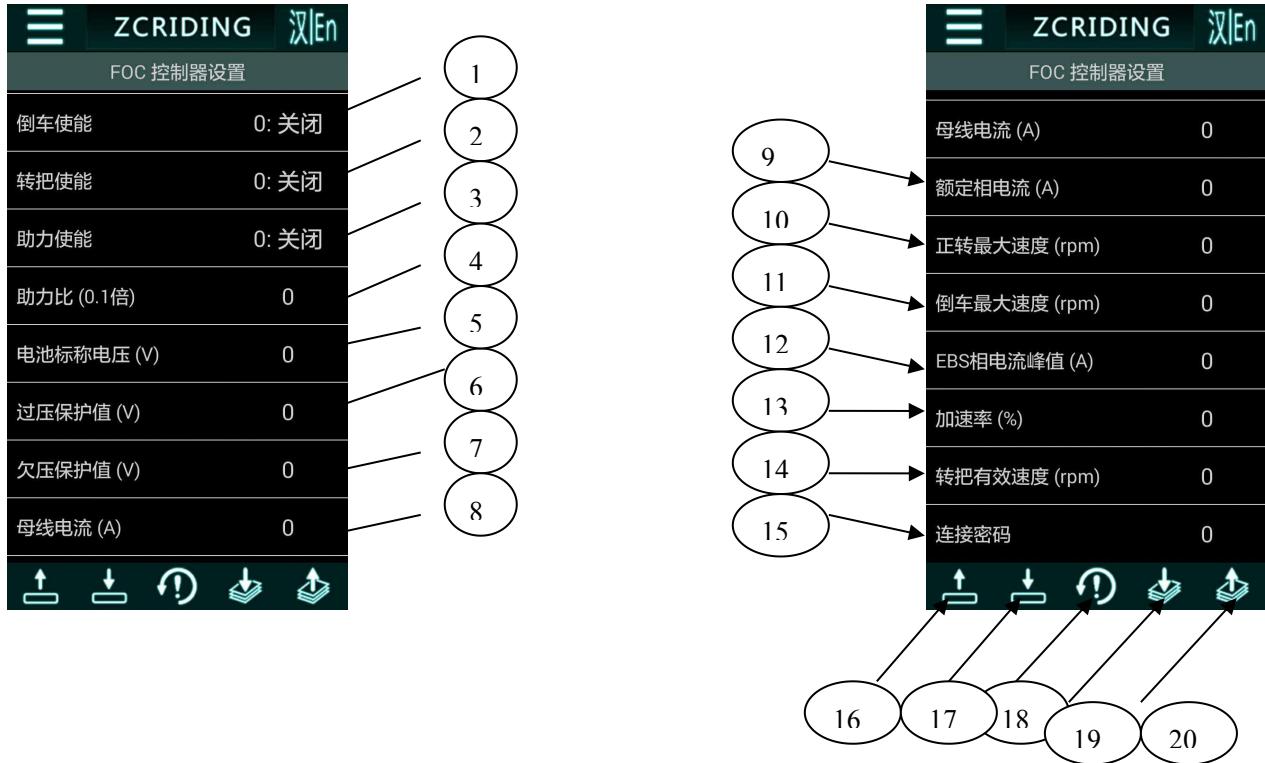

Part 2. Interface display

Part 3. Click the bluetooth logo which on the upper left corner of the interface, and display the bluetooth name, click ZC Bluetooth, if the Bluetooth indicator light is green, means that the bluetooth of the motor and mobile phone operator interface is connected successfully.

Part 4 . Click parameter setting on top right corner , display interface, setting parameter based on your own personal needs

Parameter settings interface function instruction:

1. Reverse function: after click, turn on and off option shown on interface, no reverse function of this controller, choose any option doesn't affect normal use.
2. Throttle function: after click, turn on and off option shown on interface, choose turn on if you need drive by electric; Choose turn off if you don't need drive by electric.
3. Assist function: after click, turn on and off option shown on interface. Choose turn on if you need assist function; Choose turn off if you don't need assist function.
4. Assist ratio: Parameter settings range:  $10 \leq X \leq 100$
5. Battery rated voltage: 24/36/48V, Voltage setting depends on your battery.
6. Over-voltage protection: Setting 1.25 times based on rated voltage;  
Rated voltage 48V over voltage range parameter setting:  $61 \leq X \leq 65$   
Rated voltage 36V over voltage range parameter setting:  $48 \leq X \leq 65$   
Rated voltage 24V over voltage range parameter setting:  $36 \leq X \leq 65$
7. Under voltage protection: set on the standard voltage's 0.875 times number; UV range parameter settings of 48V:  $24 \leq X \leq 48$ ;  $27 \leq X \leq 36$  for 36V;  $19 \leq X \leq 24$  for 24V;
8. Bus current: parameter setting  $10 \leq X \leq 40$
9. Rated phase current: parameter setting  $30 \leq X \leq 120$
10. Forward MAX: RPM:parameter setting  $100 \leq X \leq 700$
11. Reverse MAX RPM: parameter setting  $15 \leq X \leq 380$

- 12. EBS phase current peak value: parameter setting  $20 \leq X \leq 80$
- 13. Acceleration rate: parameter setting  $0 \leq X \leq 100$
- 14. Throttle effective speed: parameter setting  $0 \leq X \leq 700$
- 15. Access code: no code
- 16. Function 1: Upload parameters of controller to software. No need this operation during real use.
- 17. Function 2: Download parameters from software to controller. Set right parameter, press this function button and then finish the parameter setting job during real use.
- 18. Function 3: Default controller parameters. Need no this operation during use.
- 19. Function 4: Import parameters from file to software. Need no this operation during use.
- 20. Function 5: Import parameters from software to file. Need no this operation during use.

Part 5. After parameter settings, press function 2 button, then the parameters will be downloaded to controller.
